

How to provision a VPC from Service Catalog

DevX Admin team maintains a VPC template in Service Catalog and shares with all the AWS accounts in DevX. This template is designed to use non-overlapping IP so that the VPCs could be peered when needed.

Step-by-step guide

1. Switch role from devx-administrator-access (or similar roles) to ServiceCatalogEndUserRole. Refer https://docs.aws.amazon.com/IAM/latest/UserGuide/id_roles_use_switch-role-console.html for how-to-switch-a-role.
2. Navigate to Service Catalog Console in one of the regions of your interest (us-east-1, us-east-2 or us-west-2).
3. Chose "devx-vpc" product and launch. You will also have option to chose parameters to customize, say number of availability zones, etc.
